

Virtual reality animals

All you need to do is do a simple Google search for an animal such as "giant panda" on your smartphone.

Scroll down until you find a little box which says "Meet a life-sized giant panda up close."

The feature is located underneath the images and brief Wikipedia description which appears at the top of the search.

Click on "view in 3D" and then you'll need to move your phone around the room until the animal appears in your own room or surroundings.

Try searching for giant pandas, lions, tigers, bears, alpine goats, timberwolves, European hedgehogs, angler fish, and emperor penguins.
